CAREER OBJECTIVE

Computer Science undergraduate with strong foundations in Data Structures, Algorithms, Object-Oriented Programming, and Software Engineering. Experienced in building full-stack and AI-powered applications using Java, Python, React, Node.js, and Retrieval Augmented Generation-based systems.

EDUCATION

Pranveer Singh Institute of Technology	Kanpur, India
B.Tech in Computer Science Engineering (AI & ML) – 85.68%	April 2027
Intermediate (Escorts World School) – 90.5%	2022
High School (Escorts World School) – 91.67%	2020

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript
Core CS: Data Structures & Algorithms, Object Oriented Programming(OOP), Database Management System, Operating Systems
Software Engineering: SDLC, SOLID Principles, Agile Methodologies, Clean Code
Web & Backend: React.js, Node.js, Express.js, HTML5, CSS3, JavaScript, Firebase Authentication, REST APIs
Databases: MySQL, MongoDB, Firestore, FAISS /ChromaDB, RDBMS
AI/ML: Machine Learning, Deep Learning, TensorFlow, Keras, LangChain, RAG, Agentic AI
Platforms/Tools: Git, GitHub Actions, Firebase, Render, Visual Studio Code,CI/CD

PROJECTS

AcadAI — Intelligent Academic Assistant Live GitHub	March 2026 – June 2026
– Tech: Python, Streamlit, LangChain, FAISS/ ChromaDB, OpenAI API, RAG, Agentic AI – Built a multi-agent academic assistant using RAG and LLMs for answering syllabus-based academic queries. – Integrated BGE-M3 embeddings, FAISS, and ChromaDB for semantic retrieval over academic documents. – Implemented agentic workflows for summarization, comparison, and Q&A using LangChain with fallback and retry logic. – Achieved Precision@1 and MRR of 1.0 with complete retrieval within the top-4 search results.	
AlgoLab — Personalized Algorithm Visualization Platform Live GitHub	Nov 2025 – Feb 2026
– Tech: React.js, JavaScript, Node.js, Firebase Auth, Firestore, Groq API, GitHub Actions – Built a full-stack visualizer for 7+ sorting algorithms with real-time execution and performance analysis. – Developed backend logic for swap, comparison, and execution-state tracking powering interactive animations. – Integrated Groq LLM API for on-demand algorithm explanations and Big-O complexity analysis. – Reduced UI duplication by 40% via reusable React components, Firebase Auth, and Firestore dashboards.	
Kidney Disease Classification System Live GitHub	Dec 2025 – Jan 2026
– Tech: Python, TensorFlow, Keras, VGG16, Streamlit, Render – Built a CT scan classification model using VGG16 transfer learning, achieving 92% validation accuracy on a multi-class kidney disease dataset. – Designed a modular, reproducible ML pipeline with independent stages for data ingestion, augmentation, training, evaluation, and inference — enabling rapid experimentation and consistent results. – Deployed as a real-time prediction app on Render using Streamlit with file upload handling and confidence score visualization.	

ACHIEVEMENTS

- Solved 700+ problems across LeetCode, GeeksforGeeks, and HackerRank.
- Technical Head, ALGO CLUB (PSIT) — Led weekly DSA sessions and competitive programming events, directly mentoring 100+ students across batch years.
- Semi-finalist at Build With India Hackathon; Level 3 Contributor in Hacktoberfest 2025

CERTIFICATIONS

Object Oriented Programming — TakeUForward	March 2026
Oracle Cloud Infrastructure 2025 Certified Generative AI Professional — Oracle	October 2025
Introduction to Machine Learning — NPTEL	October 2025
Artificial Intelligence Fundamentals — IBM SkillsBuild	September 2025
